

PWS offer a range of solar powered warning signs which are designed to provide enhanced safety at specific locations - at schools, pedestrian crossings, crossroads etc - or any location where an advanced warning may be required to alert motorists to the presence of a potential hazard ahead.

Our school signs with ultrabright amber LED flashing beacons are supplied in mains or solar powered versions and the controlling digital timer can be programmed with the required on/off times and school closure dates for several years in advance, proving a virtually maintenance-free sign which will provide years of service.
