

Delineation & Lane Marking Solutions

FG300 Delineators

Designed to complement our existing range of passively safe products, the FG300 Delineator range features a unique clover-leaf design that ensures it returns to an upright position following impact. Manufactured from self-coloured polyurethane, the FG300 is UV stable and highly visible. Coupled with its natural resistance to fuel and oil this makes it the ideal product for use in areas with high traffic volumes.

FG300 Delineators have been crash tested and proven to survive over 50 impacts at 100 km/h. In many cases, they survive an even higher number of impacts. They can be surface mounted with fixing bolts or installed in conjunction with our unique kerb system, offering a fast, effective installation to any road surface, whether for temporary or permanent use.

- Quick Installation
- Passively Safe
- Surface Mounted
- Orange, Black or White
- Highly Visible
- Low Maintenance
