

Flexiblade Impact Resistant Bollard

The Flecta Impact Resistant Bollard is a highly visible, retro-reflective self-righting bollard perfect for traffic and commercial applications — cost-effective, robust and passively safe.

Available Single Side (Flexiblade) or Double Sided (Flexiblade Plus)

Key Features

- **Passively Safe**
- **Complies with** EN 12767
- **Fluorescent Diamond Grade** DG3 material from 3M
- **Low Maintenance**
- **Easy to Clean & Maintain**
- **Available Single or Double Sided**
- **Variations of sign faces available**
Keep Left, Keep Right, No Parking etc

Details

Flexiblade Impact Resistant Bollards are robust and highly visible. They offer unsurpassed visibility thanks to the use of 3M Diamond Grade DG3 Fluorescent Diamond Grade Microprismatic reflective sheeting.

Their ability to survive multiple impacts ensures they continue to provide safe delineation on the roadway. They are crash tested in Accordance with EN 12767:2007 "Passive safety of support structures for road Equipment"

Incorporating a patented base system, the bollard is able to withstand impacts and the unique anti-twist mechanism ensures correct realignment with the traffic following collision. Independently tested, the Flexiblade Bollard meets the requirements of a non-harmful small support structure according to level NE4 of EN 12767.

These passive safety features along with quick and easy installation and low onward maintenance help the Flexiblade Bollard improve safety for all road users.

Overall Height	930mm
Width	305mm
Keep Left/Right Arrow	300mm Dia.
Fixing	4 Bolts or foundation cage
