Solar Powered Amber Flashing Beacons — Radio Operated

Cattle Crossing Warning Signs with amber flashing beacons provide advanced warning to motorists.

Specifications

Controls

Handheld Fob for Remote Control Operation by Radio - Range 100 Metres

Characteristics

- Sign 900 x 1200mm with W151 Cattle Crossing Diamond
- CE Certified to EN12899 (2007)
- 200mm Diameter LED Amber Flashing Beacons
- Solar Powered
- Virtually Maintenance Free
- Radio Controlled Operation (handheld fob)
- Battery Discharge Protection via Timer
- Visual Confirmation of Beacons Flashing
- Strong, vandal-resistant construction
- Full Installation Service Available

Details

Designed to provide advance warning to motorists, PWS offer Solar Powered Cattle Crossing Warning Signs with radio operated Flashing Amber Beacons.

The signs are 900 x 1200mm with a W151 Cattle Crossing Warning diamond and twin Amber LED Flashing S102 Beacons x 200mm diameter.

The beacons are switched on & off via a hand-held Remote control fob which has a 100 metre operating Radius (radio fobs with a wider operating range are available if required).

The reverse side of each sign has an indicator LED which confirms visually to the operator that the beacons are flashing.

When the operator has finished moving the cattle, the beacons are switched off using the radio fob. If the operators forgets to switch off the beacons, an inbuilt timer will automatically switch off the beacons and reset the system, to prevent the batteries discharging fully and being damaged.
